

1FAX: Product Data Sheet

Overview

1FAX is a software application that manages inbound and outbound fax transmissions for IMAGE installations that wish to capture and dispatch images via fax transmission.

1FAX also manages fax phone codes and provides system administration utilities for faxing functions.

Advantages: What 1FAX Does for You

To respond to customers' demands for confirmation of goods purchased or services rendered, 1FAX permits you to fax supporting document images (such as purchase orders or receipts) from your PC, X Windows, or ASCII character terminal in direct response to a customer's request.

No longer do you have to remove documents from their filing locations, manually fax them, and risk misfiling them when you are finished. To shorten your collection cycle, 1FAX lets you fax your invoices instead of mailing them. In addition, you can combine your Line-of-Business application with IMAGE and other optional modules to interleave supporting document images with every invoice you dispatch to a customer.

Not only do you avoid the expense of printing and mailing each invoice, you also reduce the cost of hand collating invoices with their supporting images.

Features

- ❖ Automatically routes inbound faxes to user files, laser printers, or the IMAGE indexing queue
- ❖ Allows outbound fax transmission of images captured in standard graphic file formats as well as COLD documents
- ❖ Keeps a log of all inbound and outbound faxes
- ❖ Monitors the status of queued faxes
- ❖ Provides phone book support for the creation and maintenance of customer codes and associated data
- ❖ Stages faxes to be released at user-defined intervals

Technicals

- ❖ Open Systems compliant (Linux , UNIX or Windows NT/2000 Operating Systems, CCITT Group 4 Compression, TIFF, JPEG, PCX, PCL, or HPGL file format)
- ❖ Currently ported to: Linux, IBM AIX, HP-UX, SCO UNIX, Windows NT/2000.
- ❖ Works with the following client types: PC running Microsoft Windows, AS400, XWindows, and ASCII character terminals
- ❖ Compatible with Class 2 modems that conform to CCITT standards
- ❖ Fax modems attach to TTY serial ports on IMAGE server; no additional servers or fax cards required
